Dear Iowa Utilities Board Members,

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all Iowans." We believe that the risks of the carbon dioxide pipeline projects and the damage to our environment outweigh any supposed benefits the pipelines pose.

We also support the request made by the Winnebago Tribe of Nebraska for an environmental impact study.

Please order an environmental impact study to be completed on all carbon dioxide pipeline projects.

Sincerely,

Aleda Beachler

Dear Iowa Utilities Board Members,

Dear Board Members,

As a trained ecologist and current environmental science teacher in Iowa public schools, I strongly encourage you to order an EIS because Iowa has seen devastating effects to its natural lands in the past from previous pipelines. Also, the actual overall benefit to our climate resulting from this carbon capture project is highly scientifically uncertain at best. Proceeding without an independent EIS to help guide your ruling would be unfair to all Iowans and unwise for the long-term ecological, economical, and sociological well-being of our state. Thank you.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. IOWA

Voluntary Easement Miles Acquired

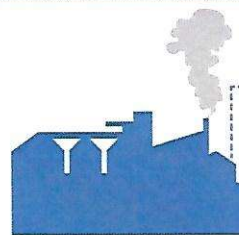

- Over 215 miles now signed
- Over 535 landowners have signed, equating more than 915 agreements executed

OVER
215
miles

Iowa Utilities Board

- Permit Application Submitted to Iowa Utilities Board January 2022 – Docket Number HLP-2021-0001
- Decision requested June 2023
- Iowa Utilities Board accepting comments at iub.iowa.gov

Construction Anticipated Start Date: **August 2023**

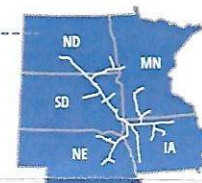

Investors

- Ethanol Plant Partners
- John Deere
- Continental Resources
- Tiger Infrastructure
- TPG Rise Climate
- Summit Agricultural Group

Partners

- 32 ethanol plants across 5 states (Nebraska, Iowa, Minnesota, North Dakota, South Dakota)
- Minnkota Power Cooperative (CO₂ storage) giving Summit Carbon Solution access to the largest of only three permitted CO₂ storage sites in the United States.

- A gas in atmospheric conditions.
- A dense phase deep underground or in a pipeline. A dense phase has the viscosity of a gas but a density closer to that of a liquid.
- Nonexplosive and noncombustible.
- Dispersed as a gas when introduced to conditions outside the pipeline.
- CO₂ pipelines have an excellent safety record exceeding pipelines that carry other materials.
- Transported at ambient temperature that does not affect the surrounding soil.

Pipeline Transport Is Critical to Carbon Capture & Storage

Transporting carbon dioxide by pipeline is the safest method for the large volumes of CO₂ that will be captured and permanently stored. With more than 5,000 miles of infrastructure currently operating in the United States, carbon dioxide pipelines have an excellent safety record.

Carbon capture and storage utilizes longstanding technology that is safe for landowners and communities.

- CO₂ capture is already deployed at more than 40 ethanol plants.
- There are 5,000 miles of existing CO₂ pipelines in the United States regulated by the Department of Transportation (DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA).
- Captured CO₂ is permanently and safely stored deep underground based on EPA standards.

Pipelines Are Highly Regulated

Stringent requirements for the safe design, construction, and operation of CO₂ pipelines have been established by the DOT PHMSA. Additionally, constructing the Summit Carbon Solutions system requires permits from the following entities:

State:

- Iowa Utilities Board
- Iowa Department of Natural Resources (DNR)

Federal:

- United States Army Corps of Engineers
- United States Fish and Wildlife

Summit Carbon Solutions is working with landowners, community leaders, stakeholders, and more with respect, honesty, and transparency to obtain the necessary rights from the landowners for any proposed temporary and permanent easements.

Summit Carbon Solution's Pipeline is Overbuilt for Safety

Summit Carbon Solutions' pipeline will be built beyond federal specifications in these ways:

- PHMSA - 195.248 Pipeline Location - requires 3ft depth below ground level. Summit Carbon Solutions will be at 4ft minimum depth.
- PHMSA - 195.210 Pipeline Location - requires 50ft setback from all dwellings. Summit Carbon Solutions is designing the pipeline that far exceeds the minimum setback.
- PHMSA - 195.250 Clearance Between Pipe and Underground Structures – Any new pipe must be at least 12" away from any other underground pipe or structure. Summit Carbon Solutions' best practice is 24".
- PHMSA 49 CFR Part 195 defines minimum requirements like the spacing between block valves, which is no more than 20 miles apart and in some cases less for Summit Carbon Solutions' pipeline.

Summit Carbon Solutions will employ a computer based, computational leak detection system that continuously monitors the operation of the pipeline from a manned control center. Similar leak detection systems are currently being utilized in the operation of numerous pipelines across the United States. Data will be continuously collected from pressure sensors, flowmeters, and temperature sensors installed along the pipeline and used to identify abnormal operating conditions. In the unlikely event of a leak, the system will provide information necessary to locate the leak, isolate the pipeline segment, and mitigate risk.

Normal of pipe line

how & how soon

Community Investment

Summit Carbon Solutions is looking to invest and volunteer in local communities. If there is somewhere we can invest in your community, please contact Kaylee Langrell 501-581-3348 or Kaylee.langrell@tkl360.com

Subject: Pipeline information sent to me
To: efshelpdesk@iub.iowa.gov <efshelpdesk@iub.iowa.gov>

Dear Utilities Board

This information was mailed to me arriving on Monday June 27. Please read through this information and see if you have any questions, I have few.

The last paragraph "**detection systems are used in numerous pipelines across the united states several**" It would be a great help to know the track record for these pipelines.

Last statement "**to locate the leak, isolate the pipeline segment , mitigate risk**" since the company has said most everything will be located in Ames Iowa my question is how long before someone from Ames drives to my location in Hancock county before the risk is mitigated? That would be a constant worry for residents to have put up with.

I object to this hazardous pipeline until we get much more of an understandable explanation and not just have to trust this greedy company or take their word for everything about the pipeline.

Thank you for reading this note

Dear Iowa Utilities Board Members,

We have to end fossil fuel use, especially with pipelines.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all Iowans." We believe that the risks of the carbon dioxide pipeline projects and the damage to our environment outweigh any supposed benefits the pipelines pose.

We also support the request made by the Winnebago Tribe of Nebraska for an environmental impact study.

Please order an environmental impact study to be completed on all carbon dioxide pipeline projects.

Sincerely,

Cathy Talarico

Dear Iowa Utilities Board Members,

I think the notion of collecting CO2 in a pipeline is a distraction designed by and for the fossil fuel industry to keep itself alive and profitable for another decade or two.
Am I right, or wrong?

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. Dear Iowa Utilities Board Members,

A pipeline construction would threaten the safety of our underground water sources and further degrade topsoil that has already been impacted by agriculture. These pipelines should be stopped for the safety of current and future Iowans. Iowans DO NOT want this. Instead of sequestering CO2, we need to release less of it in the first place. These pipelines would benefit corporations, placing their welfare above working class citizens. The risks far outweigh the benefits. Iowa does not need more environmental problems, please order an impact study and share it so Iowans can be fully informed.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. Dear Iowa Utilities Board Members,

Actions have consequences. Constructing CO2 pipelines without full knowledge of the long term consequences to the health of our soil, water, air is ignorance to the nth degree. One would think we were living in the dark ages. Surely there are engineers, scientists, and even politicians with enough foresight to want answers.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. Dear Iowa Utilities Board Members,

Hazardous CO2 pipelines are not environmentally responsible. Just the construction alone will destroy acres of timber and agricultural land. Waterways and wildlife seem to be expendable, a cost of doing business, in the view of the pipeline companies. A cost we cannot afford to pay.

Dear Iowa Utilities Board Members,

If you are so sure there will be no negative environmental impacts, then you should be very comfortable with having an independent environmental impact study done to prove your point. And if you prove wrong, well, then you know why this is a bad idea for people and for the environment, and I would hope you have the moral fortitude to discourage the building of these pipelines.

But if you balk at such a study, then it's hard to believe you care more for the environment and the people living in it than the corporate money these ventures will make.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. Dear Iowa Utilities Board Members,

Farmland needs to remain sustainable. Pipelines threaten farmlands very existence. There are other ecology friendly methods to capture carbon.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all Iowans." We believe that the risks of the carbon dioxide pipeline projects and the damage to our environment outweigh any supposed benefits the pipelines pose.

We also support the request made by the Winnebago Tribe of Nebraska for an environmental impact study.

Please order an environmental impact study to be completed on all carbon dioxide pipeline projects.

Sincerely,

Donna Ridlen

Dear Iowa Utilities Board Members,

Understanding the impacts this pipeline will have on our planet and the next 7 generations is vital to uphold the commitment to being environmentally responsible. Please take the time to complete these assessments and reevaluate the full impacts this project will have. We are all living on this planet and we all share these vital resources that the pipeline may effect. I urge you to please consider the impacts the pipeline may incur. Thank you for doing your part for everyone.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. To: customer@iub.iowa.gov

Dear Iowa Utilities Board Members,

I have no confidence in the CO2 pipelines for doing what is right for the landowners whose land they need. Iowa State University has done some studies on the impact of digging up the land and how long it will take for the land to recover. We need to know the impact, not from the pipeline companies and their greedy investors, but from unbiased and uninvolved researchers. We need to follow science, not the money. These pipelines could cause more damage than they claim to help. We need to know before they are constructed, not as an afterthought down the road.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all Iowans." Dear Iowa Utilities Board Members,

With complex social/ecological systems substantially impacted by projects like the proposed CO2 pipelines, comprehensive environmental impact assessments conducted by a team of independent experts should be required before any consideration of approval. As someone with significant knowledge about assessment processes, the common thread seems to be that those who would benefit from such projects identify shorter-term positive outcomes for them and some others and the longer-term costs and impacts that end up being borne by the ecosystem and other people being ignored and poorly investigated. While all of the long-term impacts and their severity cannot be established a priori, serious efforts to anticipate them should be carried out by independent experts. This is especially true for projects of very questionable potential social and environmental benefit.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all Iowans." Dear Iowa Utilities Board Members,

we need an independent study that I am sure will show environmental impacts will occur with this pipeline, and we also need to stop using eminent domain to even let companies have any chance of doing what they are doing for their own profit, and causing risks for all of us. Just say no. Thank you, Howard Metzger

Dear Iowa Utilities Board Members,

Projects like these always try and cut corners and every single time they do, a disaster unfolds. People deserve to know the risks.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all Iowans." We believe that the risks of the carbon dioxide pipeline projects and the damage to our environment outweigh any supposed benefits the pipelines pose.

We also support the request made by the Winnebago Tribe of Nebraska for an environmental impact study.

Please order an environmental impact study to be completed on all carbon dioxide pipeline projects.

Sincerely,

Jacob Lemons

Dear Iowa Utilities Board Members,

There is no public good derived from a pipeline that delivers liquid CO2 to eventually be refurbished into power extract oil. We lowans don't want any of this. There is a minuscule number of rich Iowa companies that want more money as they pollute our land and allow inedible crops to replace food crops.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all lowans." We believe that the risks of the carbon dioxide pipeline projects and the damage to our environment outweigh any supposed benefits the pipelines pose.

We also support the request made by the Winnebago Tribe of Nebraska for an environmental impact study.

Dear Iowa Utilities Board Members,

I think environmental impact studies prior to approval of any carbon pipeline are very important. From what I've read so far it sounds like stakeholder interest from those who will be subject to eminent domain is not great. I suggest that you balance the needs of landowners, who suffer the consequences of degraded farmland and their personal property.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all Iowans." Dear Iowa Utilities Board Members,

Eegads this a hazardous chemical with no Counties in Iowa, Fire Departments. First responders or Hospitals and Clinics are trained to deal with or clean up whatsoever. lowans will be harmed, farmland rendered unusable longer than an radioactive bomb being dropped. Please don't let big oil push this on us and our irreplaceable land.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all lowans." We believe that the risks of the carbon dioxide pipeline projects and the damage to our environment outweigh any supposed benefits the pipelines pose.

We also support the request made by the Winnebago Tribe of Nebraska for an environmental impact study.

Please order an environmental impact study to be completed on all carbon dioxide pipeline projects.

Sincerely,

Kathleen Abbas

Dear Iowa Utilities Board Members,

Summit, Navigator , and ADM are not being fully transparent or honest regarding their claims of the risk, danger, and impact of these pipelines. To ensure the safety of all Iowans' (and residents of neighboring states as well) I echo these requests for a comprehensive environmental impact study.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all Iowans." Dear Iowa Utilities Board Members,

This issue could have a huge impact on our state, our natural resources, and the health and safety of folks who live near the pipes. I don't want these pipes to happen at all, but they certainly shouldn't happen without a thorough investigation of the impacts. Please don't use rural Iowa, once again, as a way to pander to corporations at the expense of the residents. We need to rebuild rural communities. Not, literally, dig them up and put them at risk.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. Dear Iowa Utilities Board Members,

This unproven pipeline project is too massive and affects too many Iowans not to have a thorough environmental and safety study done before even one scoop of dirt is removed. Iowa is not for sale; we will not sacrifice our health, welfare, livelihoods, or natural resources for a private, money-making scheme.

Dear Iowa Utilities Board Members,

I have seen the loss of farm-able land after pipelines for other projects have destroyed the carbon-capturing complexity of the soil biome. It might be a narrow strip on any one farm, but over hundreds of miles and three pipelines worth, it is an astounding number of acres. And for what? For a pipeline that inevitably will rupture and murder everything around it as the carbon dioxide kills all oxygen using things -- emergency vehicles as well as people and other living things. Will pipeline companies have sufficient insurance to pay for all of that actual current and future destruction? For a greenwashing scheme that does not net more carbon capture after all is added in?

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. Dear Iowa Utilities Board Members,

I am asking you to do an environmental impact study on possible effects of carbon dioxide pipelines in Iowa. There are many potential problems!

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all Iowans." We believe that the risks of the carbon dioxide pipeline projects and the damage to our environment outweigh any supposed benefits the pipelines pose.

We also support the request made by the Winnebago Tribe of Nebraska for an environmental impact study.

Please order an environmental impact study to be completed on all carbon dioxide pipeline projects.

Sincerely,

Margaret Vernon

Dear Iowa Utilities Board Members,

Tribal burial grounds, endangered species, damage to our fragile ecosystem and our waterways and drinking water. More reasons to do the homework from all angles before plunging into what seems like a bad idea. This pipeline has nothing to do with utilities.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all Iowans." Dear Iowa Utilities Board Members,

There really should be a comprehensive look at each one of these pipelines proposed for environmental impacts. I own land in one of the counties. "Death by a thousand cuts" could be para-phased as a terrible choice by piecemeal environmental studies.

Dear Iowa Utilities Board Members,

I am a retired person from 31 years in Public Health, 20 yrs nursing and 11 yrs as an Environmental Health Specialist. I am a constituent of Sen Rob Hogg and have followed his work on the flooding, water shed management issues. I know the risk of Mercury emissions from that industry. I have 3 vaccine injured/toxic world we live in injuries, so I try to live my life as chemically free and clean as we as a family can, esp the oldest who is 42 and severely neurologically impaired. We must curb the toxins we are letting our kids, esp, get exposed to and letting the toxins accumulate in their bodies. Prevent the harm to begin with because rehab is expensive and does not always repair all the harm done.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. Dear Iowa Utilities Board Members,

It's apparent that this is not the climate-friendly solution it is being sold as. We need an environmental impact study to find more information about the potential negative impacts on Iowa's environment of these pipelines. Thank you for paying attention to the voices of Iowa citizens!

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all Iowans." We believe that the risks of the carbon dioxide pipeline projects and the damage to our environment outweigh any supposed benefits the pipelines pose.

We also support the request made by the Winnebago Tribe of Nebraska for an environmental impact study.

Please order an environmental impact study to be completed on all carbon dioxide pipeline projects.

Sincerely,

Nancy Richard

Dear Iowa Utilities Board Members,

The IUB should order an environmental impact study of all pipelines across Iowa. Such study must examine existing and proposed pipelines. As to the latter category, a study of the three proposed carbon dioxide pipeline projects is essential to ensure their impact is understood before they are started! Thank you in advance for your time, attention and kind consideration regarding this matter.

Dear Iowa Utilities Board Members,

Please for my family complete the study. The proposed pipeline is within 400 feet of our house/farm. My family, our land, and our livestock are all in danger if there is a leak or a burst.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all Iowans." We believe that the risks of the carbon dioxide pipeline projects and the damage to our environment outweigh any supposed benefits the pipelines pose.

We also support the request made by the Winnebago Tribe of Nebraska for an environmental impact study.

Please order an environmental impact study to be completed on all carbon dioxide pipeline projects.

Sincerely,

Sandra Laubenthal

Dear Iowa Utilities Board Members,

Carbon capture pipelines prop up an ethanol industry that has short and long term detrimental effects on Iowa's environment--overproduction of corn and the fertilizer and runoff that accompanies that which pollutes our water, among other activities.

Iowans want clean air and clean water and real solutions to climate change such as renewable energy--not ethanol. The IUB represents Iowa citizens who are crying out for environmental protection. Iowans deserve an independent environmental impact study of the effects of the carbon capture pipelines now and soon to come before the IUB.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all Iowans." Dear Iowa Utilities Board Members,

These pipelines will destroy the soil integrity of Iowa's very rich productive soils. The biggest farce is that Iowa needs carbon removal to help air quality. Atmospheric carbon actually increases corn yields in photosynthesis. I have a degree in agronomy from ISU. I also am a 5th generation farmer and 1st generation healthcare provider. This is a greenwash at the expense of Iowa farmers. The destruction of the environment to save it? Come on. What a joke. Its about money, plain and simple. It is not needed and not wanted by the majority of the landowners whose land will be affected by this garbage. You owe the people of this state the truth and the burden of environmental impact falls on the IUB with the application of the permits for construction.

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all Iowans." Dear Iowa Utilities Board Members,

I am formally asking you to order an independent environmental impact study to understand the cumulative effects the proposed carbon dioxide pipeline projects have on Iowa's environment. According to the IUB's mission statement, "The Iowa Utilities Board regulates utilities to ensure that reasonably priced, reliable, environmentally responsible, and safe utility services are available to all Iowans." We believe that the risks of the carbon dioxide pipeline projects and the damage to our environment outweigh any supposed benefits the pipelines pose.

We also support the request made by the Winnebago Tribe of Nebraska for an environmental impact study.

Please order an environmental impact study to be completed on all carbon dioxide pipeline projects.

Sincerely,

Tracy Stessman

Dear Iowa Utilities Board Members,

An independent study of the effects of these pipelines is a reasonable, responsible action. It would be a mistake not to undertake a study of this kind.

Hancock County, Iowa

**SUMMIT
CARBON
SOLUTIONS**

The ethanol industry is integral to the long-term health of the agriculture industry. The Summit Carbon Solutions Project will enable ethanol to be sold in emerging markets which allows the 32 ethanol partners to keep their plants running. As a result, farmers can continue selling their corn for a premium and protecting their way of life for generations to come.

Dear Utilities Board

A few weeks ago, I attended a Hancock Co supervisors meeting this was a hand out given out by Summit after their presentation which was the same as this paper.

Plese blow this up to read ad if you can not let me know and I will mail a copy to you.

The second line down says they will pay **Hancock Co New property taxes annual \$11,76,612**. When asked about this they finally said the tax was only on the hazardous pipeline itself and it was a depreciating tax for only 7 years. **WOW what deal**. I do not think the Supervisors should add this to the county budget.

The pipeline company would own the easement through eternity on the 50 ft of land to do whatever and whenever they choose. I on the other hand will get to **pay taxes** on all the ground of my farm including the 50 ft of easement property they own through eternity. I'm a simple country girl but that does not sound like a fair or good deal for me as a landowner. Why should I sign an easement and why would the Utilities Board even consider giving these hazardous pipeline people a permit?

Please consider this my Loud Bold Objection to this pipeline.

Thank you reading my note,

Brenda A Barr
Landowner Hancock Co. Iowa

Summit Carbon Solutions is Driving Economic Growth and Job Creation Across the Midwest and Beyond

Through a \$4.5 billion private investment, Summit Carbon Solutions will open new economic opportunities for ethanol producers and strengthen the marketplace for corn growers – helping maintain strong commodity prices and land values.

Global accounting firm Ernst & Young conducted a study on the economic impact of the Summit Carbon Solutions project. Highlights include:

Construction Phase:

- New Jobs Created: **11,427**
- Total Investment in Labor and Local Businesses: **\$2.1 billion**
- New Taxes Paid by Summit Carbon Solutions: **\$371 million**

Operations Phase:

- Annual Investments: **\$170 million**
- Total Jobs Supported: **1,170**
- Annual Investment in Labor and Local Businesses: **\$78 million**
- New Taxes Paid by Summit Carbon Solutions: **\$97 million**

Dear Utilities Board

This came in the mail on Tuesday June 28 as will see in the first line of this message it says **private investment company**, with a lot of big dollar amounts listed.

Please tell me how this company can even suggest they might use eminent domain on farmers we all know this is for them to make even bigger numbers dollars than are listed here.

I object to you even consider granting them permission for this pipeline using mostly government money, destroying the Iowa farm land and endangering peoples lives all for private gain. of a private company.

Thank you reading my issue with this project

Brenda A Barr
[880 division St](#)
Garner Iowa
