Submitted to the Iowa Utilities Board
August 12, 2022 01:20 PM CDT

Objection to be filed in Docket Nos.:

- HLP-2021-0003 (*Navigator Heartland Greenway LLC*; Petition for Hazardous Liquid Pipeline Permit)
- HLP-2022-0002 (*Wolf Carbon Solutions US LLC*; Hazardous Liquid Pipeline)

I would like to formally object to several dockets dealing with carbon capture pipelines. As a professional working full-time in sustainability, I have significant concerns about carbon pipelines. From the research I have done, there is little evidence that they provide substantial carbon savings. Additionally, the most common use of captured carbon is for enhanced oil recovery. The only way to fight climate change is to get off fossil fuels as quickly as possible. To say we will fight climate change by capturing carbon and using that carbon to get more fossil fuels out of the earth is obviously not going to work.

As private businesses, I do not feel that any of these organizations have the right to use eminent domain. I strongly believe that the Iowa Utility Board supporting these pipelines through any use of eminent domain is significant government overreach.
